Board of Trustees
City of Manchester Employees'
Contributory Retirement System
1045 Elm Street, Suite 403
Manchester, New Hampshire 03101-1824

Dear Board Members:

The results of the December 31, 2021 **Annual Actuarial Valuation of the City of Manchester Employees' Contributory Retirement System (MECRS)** are presented in this report. The purposes of the valuation were:

- To measure the System's funding progress; and
- To calculate the employer contribution rate for the City's fiscal year 2023.

This report was prepared at the request of the Board and is intended for use by the Retirement System and those designated or approved by the Board. This report may be provided to parties other than the System only in its entirety and only with the permission of the Board. GRS is not responsible for unauthorized use of this report.

The valuation results summarized in this report involve actuarial calculations that require assumptions about future events. We believe that the assumptions and methods used in this report are reasonable and appropriate for the purpose for which they have been used. However, other assumptions and methods could also be reasonable and could result in materially different results. In addition, because it is not possible or practical to consider every possible contingency, we may use summary information, estimates or simplifications of calculations to facilitate the modeling of future events. We may also exclude factors or data that are deemed to be immaterial.

Future actuarial measurements may differ significantly from the current measurements presented in this report due to actual plan experience differing from assumed; changes in economic or demographic assumptions; changes in funding policy; changes in plan provisions or applicable law; etc. An analysis of the potential range of such future measurements was beyond the scope of this valuation.

This report replaces our preliminary report dated March 1, 2022. Results presented in this report have been updated from those presented in the preliminary report, to reflect revised financial information provided by MECRS.

Information required for GASB Statements No. 67 and No. 74 will be provided in separate reports.

This report should not be relied on for any purpose other than the purposes described herein. Determinations of financial results, associated with the benefits described in this report, for purposes other than those identified above may be significantly different.

If there is other information that you need in order to make an informed decision regarding the matters discussed in this report, please contact us.

This report was prepared using our proprietary valuation model and related software which, in our professional judgment, has the capability to provide results that are consistent with the purposes of the valuation and has no material limitations or known weaknesses. We performed tests to ensure that the model reasonably represents that which is intended to be modeled.

This report has been prepared by actuaries who have substantial experience valuing public employee retirement systems. To the best of our knowledge, this report is complete and accurate and was made in accordance with standards of practice promulgated by the Actuarial Standards Board of the American Academy of Actuaries. The actuarial assumptions used for the valuation produce results which, individually and in the aggregate, are reasonable. We certify that the information contained in this report is accurate and fairly presents the actuarial position of MECRS as of December 31, 2021. GRS is not responsible for unauthorized use of this report.

The contribution rate in this report is determined using the actuarial assumptions and methods disclosed in Section C of this report. This report includes risk metrics on page A-16 but does not include a more robust assessment of the risks of future experience not meeting the actuarial assumptions. Additional assessment of risks was outside the scope of this assignment.

This valuation assumed the continuing ability of the plan sponsor to make the contributions necessary to fund this plan. A determination regarding whether or not the plan sponsor is actually able to do so is outside our scope of expertise and was not performed.

The findings in this report are based on data and other information through December 31, 2021. The valuation was based upon information, furnished by the Retirement System, concerning Retirement System benefits, financial transactions, and individual members, terminated members, retirees and beneficiaries. Data was checked for year-to-year consistency, but was not audited.

This report does not fully reflect the ongoing impact of COVID-19, which is highly likely to influence demographic experience and economic expectations in the short term, at a minimum. We will reflect the impacts after the valuation date annually as it emerges.

Heidi G. Barry and Kevin T. Noelke are Members of the American Academy of Actuaries (MAAA) and meet the Qualification Standards of the American Academy of Actuaries to render the actuarial opinions contained herein. The signing actuaries are independent of the plan sponsors.

Respectfully submitted,
Gabriel, Roeder, Smith & Company

Heidi G. Barry, ASA, FCA, MAAA

Kevin T. Noelke, ASA, MAAA, FCA

SECTION A

VALUATION RESULTS

Executive Summary

Funding Objective

The funding objective of the Retirement System is to establish and receive contributions which, when expressed as percents of active member payroll, will remain approximately level from year to year and will accumulate sufficient assets over each member's working lifetime to finance promised benefits throughout retirement.

Contribution Rates

The Retirement System is supported by member contributions, City contributions and investment income from Retirement System assets.

Contributions which satisfy the funding objective are determined by the annual actuarial valuation and are sufficient to:

- Cover the actuarial present value of benefits allocated to the current year by the actuarial cost method described in Section C (the normal cost); and
- Finance over a period of future years the actuarial present value of benefits not covered by valuation assets and anticipated future normal costs (unfunded actuarial accrued liability).

The computed pension contribution rate for the City's fiscal year 2023 is 32.02% of covered payroll.

The computed health subsidy contribution rate for the City's fiscal year 2023 is 2.84% of covered payroll.

The details of these contribution rates are shown on pages A-7 and A-8.

The contribution rates are sufficient to finance the employer normal cost and to amortize the unfunded pension actuarial accrued liability (full funding credit) as a level percent-of-payroll over a period of 18 years for pension benefits, and 18 years for health subsidy benefits.

Summary Statement of System Resources and Obligations

December 31, 2021

Present Resources and Expected Future Resources

	Pension	Health
A. Actuarial value of System assets:		
1. Net assets from System financial statements	\$287,263,228	\$20,127,378
2. Funding value adjustment	(21,988,650)	(1,540,656)
3. Valuation assets	265,274,578	18,586,722
B. Present value of expected future employer contributions:		
1. For normal costs	38,948,410	387,525
2. For unfunded actuarial accrued liabilities	161,069,856	19,106,641
3. Totals	200,018,266	19,494,166
C. Present value of expected future member contributions	18,123,271	6,041,090
D. Total Present and Expected Future Resources	\$483,416,115	\$44,121,978

Actuarial Present Value of Expected Future Benefit Payments

	Pension	Health
A. To retirees and beneficiaries	\$256,057,797	\$22,431,835
B. To vested terminated members	9,467,370	773,521
C. To present active members:		
1. Allocated to service rendered prior to valuation date	160,819,267	14,488,007
2. Allocated to service likely to be rendered after valuation date	57,071,681	6,428,615
3. Total	217,890,948	20,916,622
D. Total Actuarial Present Value of Expected Future Benefit Payments	\$483,416,115	\$44,121,978

Summary of Current Asset Information Furnished for the Valuation

Development of Funding Value of Assets

Year Ended December 31:	2019	2020	2021	2022	2023	2024	2025
Assumed Investment Return	7.00%	7.00%	6.75%	6.75%			
A. Funding Value Beginning of Year	\$234,127,265	\$243,908,279	\$261,640,624				
B. Market Value End of Year	247,562,088	277,348,522	307,390,606				
C. Market Value Beginning of Year	216,118,207	247,562,089	277,348,522				
D. Non-Investment Net Cash Flow	(3,296,911)	(3,131,411)	(2,889,612)				
D1. Post-Valuation Adjustment	94,906	(1)	0				
E. Investment Income							
E1. Market Total: B - C - D - D1	34,645,886	32,917,845	32,931,696				
E2. Amount for Immediate Recognition	16,273,517	16,963,980	17,563,218				
E3. Amount for Phased-In Recognition: E1-E2	18,372,369	15,953,865	15,368,478				
F. Phased-In Recognition of Investment Income							
F1. Current Year: 0.20 x E3	3,674,474	3,190,773	3,073,696				
F2. First Prior Year	(5,686,743)	3,674,474	3,190,773	\$ 3,073,696			
F3. Second Prior Year	3,294,870	(5,686,743)	3,674,474	3,190,773	\$ 3,073,696		
F4. Third Prior Year	(573,596)	3,294,870	(5,686,743)	3,674,474	3,190,773	\$ 3,073,696	
F5. Fourth Prior Year	(3,904,597)	(573,598)	3,294,870	(5,686,742)	3,674,473	3,190,773	\$ 3,073,694
F6. Total Recognized Investment Gain	(3,195,592)	3,899,776	7,547,070	4,252,201	9,938,942	6,264,469	3,073,694
G. Preliminary Funding Value End of Year: A + D + E2 + F6	243,908,279	261,640,624	283,861,300				
H. Actuarial Value after Application of 20% Corridor Limit	243,908,279	261,640,624	283,861,300				
I. Difference between Market & Funding Value	3,653,809	15,707,898	23,529,306				
J. Recognized Rate of Return	5.6 %	8.6 %	9.7 %				
K. Market Rate of Return	16.2 %	13.4 %	11.9 %				
L. Ratio of Funding Value to Market Value	98.5 %	94.3 %	92.3 %				

The Funding Value of Assets recognizes assumed investment income (line E2) fully each year. Differences between actual and assumed investment income (line E3) are phased-in over a closed five-year period. During periods when investment performance exceeds the assumed rate, Funding Value of Assets will tend to be less than Market Value. During periods when investment performance is less than the assumed rate, Funding Value of Assets will tend to be greater than Market Value. The Funding Value of Assets is unbiased with respect to Market Value. At any time, it may be either greater or less than Market Value. If actual and assumed rates of retirement income are exactly equal for four consecutive years, the Funding Value will become equal to Market Value.

Allocation of Funding Value of Assets Year Ended December 31, 2021

(A) Total Market Value	\$307,390,606
(B) Pension Market Value	\$287,263,228
(C) Ratio: (B)/(A)	93.4522%
(D) Total Funding Value	\$283,861,300
(E) Pension Funding Value: (D) x (C)	\$265,274,578
(F) Health Funding Value: (D) - (E)	\$ 18,586,722

Development of Unfunded Actuarial Accrued Liability Year Ended December 31, 2021

	Pension	Health
Present Value of Future Benefits - Retirees	\$256,057,797	\$22,431,835
Present Value of Future Benefits - Deferreds	9,467,370	773,521
Present Value of Future Benefits - Actives	217,890,948	20,916,622
Total Present Value of Future Benefits	\$483,416,115	\$44,121,978
Present Value of Future Normal Cost	57,071,681	6,428,615
Actuarial Accrued Liability	\$426,344,434	\$37,693,363
Actuarial Value of Assets	265,274,578	18,586,722
Unfunded Actuarial Accrued Liability	\$161,069,856	\$19,106,641
Funded Ratio	62.2%	49.3%
Prior Year Funded Ratio	59.2%	46.6%

Derivation of Experience Gain (Loss) Year Ended December 31, 2021

Actual experience will never (except by coincidence) match exactly with assumed experience. Gains and losses often cancel each other over a period of years, but sizable year-to-year fluctuations are common. Detail on the derivation of the experience gain (loss) is shown below, along with a year-by-year comparative schedule.

	Pension	Health
(1) UAAL* at start of year	\$168,702,748	\$18,806,048
(2) Total normal cost from last valuation	6,793,736	800,532
(3) Actual contributions (employer & employee)	19,620,107	2,150,111
(4) Interest accrual: $[(1) + 1/2 ((2) - (3))] \times 0.0675$	10,954,545	1,223,860
(5) Expected UAAL before changes: (1) + (2) - (3) + (4)	166,830,922	18,680,329
(6) Change from new assumptions and methodology	0	0
(7) Change from ad-hoc COLA increases (above or below assumed)	0	N/A
(8) Change from Chapter 159 service upgrade	205,713	N/A
(9) Expected UAAL after changes: (5) + (6) + (7) + (8)	167,036,635	18,680,329
(10) Actual UAAL at end of year	161,069,856	19,106,641
(11) Gain (loss): (9) - (10)	5,966,779	(426,312)
(12) Gain (loss) as percent of actuarial accrued liabilities at start of year	1.4 %	(1.2)%

* *Unfunded Actuarial Accrued Liability.*

Valuation Date	Experience Gain (Loss) as % of Beginning Accrued Liability	
	Pension	Health
December 31		
2012	(4.2)%	(3.1)%
2013	(0.1)%	(0.1)%
2014	(0.8)%	(1.1)%
2015	(2.9)%	(6.2)%
2016	0.4 %	(0.8)%
2017	0.0 %	0.6 %
2018	(2.1)%	(5.1)%
2019	(2.0)%	(1.2)%
2020	0.2 %	1.2 %
2021	1.4 %	(1.2)%

Computed Contributions for the City's Fiscal Year 2023

Contributions For	Contributions Expressed as % of Active Member Payroll
Total Normal Cost	13.53%
Member Contributions	<u>3.75%</u>
Employer Normal Cost	9.78%
Unfunded Actuarial Accrued Liabilities*	<u>22.24%</u>
Employer Pension Total	32.02%
Health Contribution**	<u>2.84%</u>
Employer Total	34.86%
Valuation Payroll	\$ 55,323,580
Projected Payroll	\$ 57,411,127
Estimated Contribution Dollars	\$ 20,013,519
<u>Pension</u>	
Unfunded Actuarial Accrued Liabilities	\$161,069,856
Funded Status	62.2%
<u>Health</u>	
Unfunded Actuarial Accrued Liabilities	\$ 19,106,641
Funded Status	49.3%

* Unfunded actuarial accrued liabilities for pension are currently financed as a level percent of payroll over a remaining amortization period of 18 years.

** Currently based on a remaining 18-year amortization of unfunded actuarial accrued liabilities for Health.

Note: For each 1% ad-hoc COLA increase above the assumed COLA, the UAAL will increase by approximately \$2,561,000 and the employer contribution rate will increase by approximately 0.36% (based on current payroll and a 18-year amortization period). In developing these costs for the ad-hoc COLA increase, it was assumed that the increase would be a one-time permanent increase to all members retired as of December 31, 2021 and the additional liability would be amortized over 18 years. It was also assumed that the increase would be effective on January 1, 2022.

The computed contribution rate shown above is in compliance with the Board's funding policy. Users of this report should be aware that contributions made at that rate do not guarantee benefit security. Given the importance of benefit security to any retirement system, we recommend benefit security be considered when adopting a contribution rate. The Board is free to adopt a larger contribution rate than shown herein, if they believe it to be appropriate and if such larger contribution is based on sound actuarial funding, methods and assumptions.

Computed Contributions for the City's Fiscal Year 2023

<u>Contribution Rate Reconciliation</u>	<u>% of Payroll</u>		
	<u>Pension</u>	<u>Health</u>	<u>Total</u>
Fiscal Year 2022 Rate	32.70 %	2.76 %	35.46 %
Normal Cost Change*	(0.01)%	N/A	(0.01)%
Miscellaneous Changes in Group Demographics	0.03 %	0.01 %	0.04 %
Assumption and Methodology Changes	0.00 %	0.00 %	0.00 %
Employer Portion of SB 402 Purchases (change in liability)	0.01 %	0.00 %	0.01 %
COLA (portion above/(below) the assumption)	0.00 %	0.00 %	0.00 %
Payroll Growth Less Than Expected	0.12 %	0.01 %	0.13 %
Experience (Gain) Loss	(0.83)%	0.06 %	(0.77)%
Fiscal Year 2023 Rate	32.02%	2.84 %	34.86%

* Approximate change in normal cost due to SB 402 purchases.

Comments

Comment A

Results: The Retirement System is 62.2% funded for pension benefits and 49.3% funded for health subsidy benefits as of December 31, 2021. The pension Unfunded Actuarial Accrued Liability (UAAL) of \$161,069,856 is amortized over a closed 18-year period; the health subsidy UAAL of \$19,106,641 is amortized over a closed 18-year period.

Comment B

Experience: Experience during the year ended December 31, 2021 was more favorable than assumed for pension benefits and less favorable than assumed for the health subsidy.

Pension: The primary source of experience gain was investment return. On a funding value basis, recognized return was 9.7% compared to a 6.75% assumed rate of return. Since the rate of return on a market value basis was 11.9% during the year, 1/5 of this year's market gain was recognized in this year's funding value and 1/5 of this year's market gain will be recognized in each of the next four years. Gains also occurred from more retiree deaths than expected (23 expected versus 26 actual).

The investment and mortality gains were partially offset by losses related to active experience (more retirements and disabilities than expected). Overall, the pension experience gain was approximately 1.4% of beginning of year liabilities. The pension funding status increased from 59.2% to 62.2%.

Health: Overall, the health experience loss was approximately 1.2% of beginning of year liabilities. The primary source of experience loss for health was more elections than assumed (60.6% actual vs 55% assumed). The experience loss for health was somewhat offset by investment return (6.75% assumed versus 9.7% recognized; see asset related comment under pension section). The health funding status increased from 46.6% to 49.3%.

Comment C

Benefit Enhancements:

1. The previously adopted SB 402 allows for members to upgrade their benefit multiplier under Chapter 159 from 1.5% to 2.0% per year of service rendered prior to 1999 when they choose. Liabilities increased by \$411,426 as a result of members electing to purchase this benefit during 2021. An additional \$205,713 in member contributions was contributed as a result of these elections.
2. COLA increases during 2021 were assumed to be 1.00% of current pensions. In 2021, actual increases were 1.00% of current pensions.

Comments (Continued)

Comment D

Assumption Changes:

There were no assumption changes during the year.

Comment E

Retiree Health Benefits: Post-retirement health care benefits are funded in part by retired members (via co-pays, deductibles, etc.), but mostly by employer contributions to the Retirement System that are permitted (up to certain limits) by §401(h) of the U.S. Internal Revenue Code. IRC §401(h) permits a defined benefit plan to provide medical benefits for retired employees if, among other things:

- A separate medical care account is maintained.
- The benefits satisfy non-discrimination rules.
- The medical benefits, along with any life insurance provided by the plan, are subordinate to the retirement benefits. Benefits are considered subordinate if they do not exceed 25% of the aggregate contributions other than contributions to fund past service liabilities.

The health care contribution rate was determined to pass the 25% test for the 2023 City fiscal year as follows:

Employer Pension Rate (not more than normal cost)	9.78%
Employee Pension Rate	<u>3.75%</u>
Total Pension Rate*	13.53%
Maximum Health Rate (1/3 x Pension Rate)	4.51%
Employee Health Rate	<u>1.25%</u>
Maximum Employer Health Rate	3.26%
Actual Employer Health Rate	2.84%

* *Smaller of actual contribution or projected unit credit normal cost rate.*

Although the IRC §401(h) allows for a much more complicated test, the results of the simplified approach illustrated above indicate that the more complicated test is not warranted.

Comment F

Health Valuation: Post-retirement health subsidy valuation results were included in this valuation. Effective with the December 31, 2007 valuation, we set the utilization assumption at 60%. Effective with the December 31, 2012 valuation, this assumption is 55%.

New Retirements in Year	New Retirees	New Recipients Electing Health Care Subsidy	Election %
2006	35	17	48.6%
2007	38	19	50.0%
2008	36	20	55.6%
2009	39	18	46.2%
2010	34	18	52.9%
2011	50	28	56.0%
2012	55	30	54.5%
2013	51	26	51.0%
2014	52	29	55.8%
2015	89	55	61.8%
2016	53	27	50.9%
2017	55	32	58.2%
2018	57	34	59.6%
2019	60	30	50.0%
2020	68	33	48.5%
2021	66	40	60.6%

Comment G

Health Valuation: The calculations contained herein were not intended to satisfy the parameters of GASB Statement No. 74, and should not be used for that purpose. Separate calculations are needed for GASB Statement No. 74, which will be provided in a separate report.

Comment H

The load for end of career payments affecting final average compensation is currently 12%. Below is a historical schedule of these increases over the last 10 years.

Year Ended December 31,	Average Increase in Final Average Earnings from Expected Amount
2012	13.8%
2013	14.5%
2014	15.4%
2015*	17.4%
2016	10.1%
2017	11.9%
2018	10.2%
2019	13.7%
2020 [#]	13.2%
2021 [@]	14.9%
5-Year Average	12.8%
10-Year Average	13.5%

* Final Average Earnings before and after lump sums in 2015 were calculated based on member data as well as option factors from the previous actuary. For all other years, this lump sum information was provided.

Excludes 3 members with fewer than 3 years of pay history who do not appear to have been full-time employees.

@Excludes 5 members with fewer than 3 years of full pay history.

Comments (Concluded)

Comment I

Investment Return: The current version of ASOP No. 27 suggests that either the expected geometric return (i.e., 50th percentile) or the expected arithmetic return is suitable for use as a reasonable investment return assumption. Because GRS is a benefit consulting firm and does not develop or maintain capital market expectations, we request and monitor forward-looking expectations developed by several major forecasting firms. Our analysis is based on the 2021 GRS Capital Market Assumption Modeler (CMAM). Based on the average of each of the forecasters' expectations over a 10-year investment horizon, this would result in a range of 5.52% to 6.30% for the Retirement System for this valuation. We have expanded our reasonable range to include the average of the last three years of CMAMs expected geometric and arithmetic returns of 5.97% and 6.72%, respectively.

Given that the current assumption of 6.75% is at the high-end of this range, the Board may wish to consider lowering this assumption for future valuations. The higher the investment return assumption, the less margin that will exist for actuarial standards reasonability purposes in future years if capital market expectations are lowered from their current levels. In other words, if capital market assumptions are lowered from current levels, it may become necessary to lower the investment return assumption prior to the next assumption review. The Actuarial Standards of Practice require the investment return assumption to be reviewed on an annual basis.

Comment J

We certify that the valuation is complete and accurate and was made in accordance with generally recognized actuarial methods. The actuarial assumptions that will be summarized in Section C of the valuation report are, in aggregate, a reasonable representation of the past and anticipated future experience of the System.

Other Observations

General Implications of Contribution Allocation Procedure or Funding Policy on Future Expected Plan Contributions and Funded Status

Given the plan's contribution allocation procedure, if all actuarial assumptions are met (including the assumption of the plan earning 6.75% on the actuarial value of assets), it is expected that:

- 1) The employer normal cost as a percentage of pay will remain approximately level year to year*;
- 2) The unfunded actuarial accrued liability will be fully amortized after 18 years; and
- 3) The funded status of the plan will increase gradually toward a 100% funded ratio.

** Service rendered after 2000 has a higher benefit multiplier than service rendered before 2000, unless members elect to upgrade their pre-2000 service. Normal Costs are gradually increasing to the post-2000 benefit level as members with pre-2000 service are replaced or upgrade their service.*

Limitations of Funded Status Measurement

Unless otherwise indicated, a funded status measurement presented in this report is based upon the actuarial accrued liability and the actuarial value of assets. Unless otherwise indicated, with regard to any funded status measurements presented in this report:

- 1) The measurement is inappropriate for assessing the sufficiency of plan assets to cover the estimated cost of settling the plan's benefit obligations.
- 2) The measurement is inappropriate for assessing the need for or the amount of future employer contributions.
- 3) The measurement would produce a different result if the market value of assets were used instead of the actuarial value of assets, unless the market value of assets is used in the measurement.

Limitation of Project Scope

Actuarial standards do not require the actuary to evaluate the ability of the plan sponsor or other contributing entity to make required contributions to the plan when due. Such an evaluation was not within the scope of this project and is not within the actuary's domain of expertise. Consequently, the actuary performed no such evaluation.

Risks Associated with Measuring the Accrued Liability and Actuarially Determined Contribution

The determination of the accrued liability and the actuarially determined contribution requires the use of assumptions regarding future economic and demographic experience. Risk measures, as illustrated in this report, are intended to aid in the understanding of the effects of future experience differing from the assumptions used in the course of the actuarial valuation. Risk measures may also help with illustrating the potential volatility in the accrued liability and the actuarially determined contribution that result from the differences between actual experience and the actuarial assumptions.

Future actuarial measurements may differ significantly from the current measurements presented in this report due to such factors as the following: plan experience differing from that anticipated by the economic or demographic assumptions; changes in economic or demographic assumptions due to changing conditions; increases or decreases expected as part of the natural operation of the methodology used for these measurements (such as the end of an amortization period, or additional cost or contribution requirements based on the Plan's funded status); and changes in plan provisions or applicable law. The scope of an actuarial valuation does not include an analysis of the potential range of such future measurements.

Examples of risk that may reasonably be anticipated to significantly affect the plan's future financial condition include:

1. **Investment Risk** – actual investment returns may differ from the expected returns;
2. **Asset/Liability Mismatch Risk** – changes in asset values may not match changes in liabilities, thereby altering the gap between the accrued liability and assets and consequently altering the funded status and contribution requirements;
3. **Contribution Risk** – actual contributions may differ from expected future contributions. For example, actual contributions may not be made in accordance with the plan's funding policy or material changes may occur in the anticipated number of covered employees, covered payroll, or other relevant contribution base. The continuing ability of the plan sponsor to make the contributions necessary to fund the plan is outside our scope of expertise and was not performed by GRS;
4. **Salary and Payroll Risk** – actual salaries and total payroll may differ from expected, resulting in actual future accrued liability and contributions differing from expected;
5. **Longevity Risk** – members may live longer or shorter than expected and receive pensions for a period of time other than assumed; and
6. **Other Demographic Risks** – members may terminate, retire or become disabled at times or with benefits other than assumed resulting in actual future accrued liability and contributions differing from expected.

The effects of certain trends in experience can generally be anticipated. For example, if the investment return since the most recent actuarial valuation is less (or more) than the assumed rate, the cost of the plan can be expected to increase (or decrease). Likewise, if longevity is improving (or worsening), increases (or decreases) in cost can be anticipated.

Plan Maturity Measures

Risks facing a pension plan evolve over time. A young plan with virtually no investments and paying few benefits may experience little investment risk. An older plan with a large number of members in pay status and a significant trust may be much more exposed to investment risk. Generally accepted plan maturity measures include the following:

	Pension		Health	
	2021	2020	2021	2020
Ratio of the market value of assets to total payroll	5.19	4.79	0.36	0.32
Ratio of actuarial accrued liability to payroll	7.71	7.63	0.68	0.65
Ratio of actives to retirees and beneficiaries	1.03	1.10	2.54	2.76
Ratio of net cash flow to market value of assets	-1.22%	-1.43%	3.09%	3.34%
Duration of the actuarial accrued liability	13.41	13.55	15.33	15.62

Ratio of Market Value of Assets to Payroll

The relationship between assets and payroll is a useful indicator of the potential volatility of contributions. For example, if the market value of assets is 4.0 times the payroll, a return on assets 5% different than assumed would equal 20% of payroll. A higher (lower) or increasing (decreasing) level of this maturity measure generally indicates a higher (lower) or increasing (decreasing) volatility in plan sponsor contributions as a percentage of payroll.

Ratio of Actuarial Accrued Liability to Payroll

The relationship between actuarial accrued liability and payroll is a useful indicator of the potential volatility of contributions for a fully funded plan. A funding policy that targets a funded ratio of 100% is expected to result in the ratio of assets to payroll and the ratio of liability to payroll converging over time.

The ratio of liability to payroll may also be used as a measure of sensitivity of the liability itself. For example, if the actuarial accrued liability is 7.5 times the payroll, a change in liability 2% other than assumed would equal 15% of payroll. A higher (lower) or increasing (decreasing) level of this maturity measure generally indicates a higher (lower) or increasing (decreasing) volatility in liability (and also plan sponsor contributions) as a percentage of payroll.

Ratio of Actives to Retirees and Beneficiaries

A young plan with many active members and few retirees will have a high ratio of active to retirees. A mature open plan may have close to the same number of actives to retirees resulting in a ratio near 1.0. A super-mature or closed plan may have significantly more retirees than actives resulting in a ratio below 1.0.

Ratio of Net Cash Flow to Market Value of Assets

A positive net cash flow means contributions exceed benefits and expenses. A negative cash flow means existing funds are being used to make payments. A certain amount of negative net cash flow is generally expected to occur when benefits are prefunded through a qualified trust. Large negative net cash flows as a percent of assets may indicate a super-mature plan or a need for additional contributions.

Duration of Actuarial Accrued Liability

The duration of the actuarial accrued liability may be used to approximate the sensitivity to a 1% change in the assumed rate of return. For example, duration of 10 indicates that the liability would increase approximately 10% if the assumed rate of return were lowered 1%.

Additional Risk Assessment

Additional risk assessment is outside the scope of the annual actuarial valuation. Additional assessment may include scenario tests, sensitivity tests, stochastic modeling, stress tests, and a comparison of the present value of accrued benefits at low-risk discount rates with the actuarial accrued liability.

This is an open group projection, meaning it maintains the current active population size by replacing exiting active members with new hires (which differs from the closed group projection in the GASB 67/68 report). Projected Assets assume mid-year cash flows and are projected to increase at the current assumed market rate of return of 6.75%. The MECRS objective is to reach 100% funding by 2042. In addition, it is the intention of the MECRS to reach 75% funding on or before December 31, 2030. The Employer Contribution as a percent of pay declines in the first 4 years due to scheduled phase-in gains in the Asset Valuation Method. While MECRS contributes a level percent of pay, the required dollar contribution for an open group is projected to increase with wage inflation (2.5% for MECRS). When the Retirement System is 100% funded, the Employer Contribution is equal to the Normal Cost. Projections do not predict the future. Rather, they provide an illustration of certain benchmarks under a certain set of assumptions.

SECTION B

BENEFIT PROVISIONS AND VALUATION DATA

Summary of Benefit Provisions as of December 31, 2021

Eligibility

Amount

NORMAL RETIREMENT

Members are eligible to retire at age 60.

Straight life pension equals 2.0% of 3-year Final Average Earnings (FAE) times service on and after January 1, 1999 *plus* 1.5% of FAE times service before January 1, 1999.

Members with at least 20 years of service at retirement are eligible for a minimum benefit if employed on or before January 1, 1974.

Minimum benefit for eligible members is 50% of FAE.

EARLY RETIREMENT

Members are eligible to retire early if the sum of age and service is at least 80, or at age 55 with at least 20 years of service.

Computed as a normal retirement pension. If the early retirement occurs prior to the member attaining age 60, the benefit is reduced by 1/6 of 1% for each month that the early retirement precedes age 60.

DEFERRED RETIREMENT

Members are eligible to retire with a deferred benefit after attaining at least 5 years of service, provided they do not take a refund of member contributions.

Pension is computed as a normal retirement pension, based on service and FAE on date of termination. Commencement of benefits begins at age 60.

NON-DUTY DISABILITY

Members are eligible upon attainment of 15 years of service.

Pension is computed as a normal retirement pension based on service and FAE as of date of disability.

DUTY DISABILITY

No age or service requirement.

Pension is computed as a normal retirement pension based on service and FAE as of date of disability. Minimum duty disability benefit is 50% of FAE.

Summary of Benefit Provisions as of December 31, 2021

Eligibility

Amount

ORDINARY DEATH-IN-SERVICE

(1) Any age with fewer than 5 years of service.	Beneficiary receives member's contributions and accumulated interest, and an additional lump sum equal to one year's salary.
(2) Any age with 5 or more years of service.	Beneficiary receives the option of (1) the greater of (a) 50% of the accrued service retirement benefit (without any early retirement reduction); or (b) pension computed as normal or early retirement benefit (depending on eligibility), actuarially reduced as if the member had elected the 100% Joint & Survivor benefit; or (2) lump sum equal to 100% of base salary plus the member's accumulated contributions (including interest).

DUTY DEATH-IN-SERVICE

Death as a result of a work-related accident; not caused by willful neglect of the member.	The option of (1) the greater of (a) 50% of FAE, or (b) pension computed as an early retirement benefit actuarially reduced as if the member had elected the 100% Joint & Survivor benefit; or (2) a lump sum as described below; options payable to the spouse or child(ren) under age 18. If no spouse or child(ren) are alive at the time of the member's death, a lump sum is payable to the member's estate in the amount of 100% of base salary plus the member's accumulated contributions (including interest) plus accrued fringe benefits not paid at the time of death.
--	--

MEMBER CONTRIBUTIONS

3.75% of pay for service on and after January 1, 1999. 2.5% of pay for service prior to January 1, 1999. Contributions are credited with 5.0% interest per annum. Members may elect to contribute additional contributions which are accounted for separately. At retirement, the additional contribution balance is annuitized to provide an additional benefit within certain limits.

Summary of Benefit Provisions as of December 31, 2021

OPTIONAL FORMS OF PAYMENT

In lieu of the straight life benefit, a member may elect an actuarially reduced benefit in one of the following forms:

- 100% Joint & Survivor with pop-up
- 66 2/3 % Joint & Survivor with pop-up
- 50% Joint & Survivor with pop-up
- 10-year Certain & Life Option

The actuarial factors for optional forms of payment are based on the 1983 Group Annuity Mortality Table and 7.5% interest.

SERVICE UPGRADE

Members may elect to purchase an increase in their benefit multiplier for service rendered before 1999 under Chapter 159 (or Senate Bill 402). The cost to the member is ½ of the actuarially determined increase in System costs and results in a benefit based on 2% of FAE for the time purchased.

HEALTH SUBSIDY

Current and future retired members who are in receipt of an annuity benefit may elect to participate in a monthly health insurance subsidy. Spouses, dependents, and/or beneficiaries are not eligible for any subsidy. The full amount of the monthly health insurance subsidy is \$200 as of January 1, 2006 and increases by 4% annually beginning January 1, 2007. The full \$200 is prorated based on the member's service at retirement, as shown in the schedule below. Members who were already retired as of March 2006 are entitled to 50% of the subsidy available to members retired after March 2006. Active members must contribute 1.25% of pay. Member contributions for the health subsidy are non-refundable.

Service at Retirement	% of Full Subsidy Payable	
	Active on or after March 1, 2006	Terminated Vested or Retired on March 1, 2006
Fewer than 10 years	25.0%	12.5%
10 years or more, but fewer than 15 years	50.0%	25.0%
15 years or more, but fewer than 20 years	75.0%	37.5%
20 years or more	100.0%	50.0%

Totals	411	174	130	124	130	43	58	1,070	\$55,323,580

While not used in the financial computations, the following group averages are computed and shown because of their general interest.

Age: 47.7 years
Service: 11.1 years
Annual Pay: \$51,704

SECTION C

VALUATION METHODS AND ASSUMPTIONS

Actuarial Cost Method

Normal cost and the allocation of benefit values between service rendered before and after the valuation date was determined using the *individual entry-age actuarial cost method* having the following characteristics:

- The annual normal cost for each individual active member, payable from the date of employment to the date of retirement, are sufficient to accumulate the value of the member's benefit at the time of retirement; and
- Each annual normal cost is a constant percentage of the member's year-by-year projected covered pay.

MECRS currently has a tiered benefit structure with the ultimate tier being more costly than the initial tier. The normal cost is computed based on this tiered structure. As a result, the normal cost rate is expected to increase as the members affected by the initial tier are replaced by new members, or when members upgrade their prior service.

Financing of Unfunded Actuarial Accrued Liabilities. Unfunded Actuarial Accrued Liabilities were amortized by level (principal and interest combined) percent-of-payroll contributions assuming 2.50% wage inflation over 18 future years for pension benefits, and over 18 future years for health subsidy benefits. The amortization period is closed for both pension benefits and health subsidy benefits.

Asset Valuation Method. Last year's valuation assets are increased by contributions and reduced by refunds, benefit payments and expenses. An amount equal to the assumed investment return for the year is then added. Differences between actual return on a market value basis and an assumed return are phased-in over a five-year period.

Actuarial Assumptions Used for the Valuation

The contribution requirements and benefit values of the System are calculated by applying actuarial assumptions to the benefit provisions and member information furnished, using the actuarial cost method described on the previous page.

The principal areas of financial risk which require assumptions about future experience are:

- Long-term rates of investment return to be generated by the assets of the System,
- Patterns of pay increases to members,
- Rates of mortality among members, retirees and beneficiaries,
- Rates of withdrawal of active members,
- Rates of disability among members, and
- The age patterns of actual retirement.

In a valuation, the monetary effect of each assumption is calculated for as long as a present covered person survives – a period of time which can be as long as a century.

Actual experience of the System will not coincide exactly with assumed experience, regardless of the accuracy of the assumptions, or the skill of the actuary and the precision of the many calculations made. Each valuation provides a complete recalculation of assumed future experience and takes into account all past differences between assumed and actual experience. The result is a continual series of adjustments (usually small) to the computed contribution rate.

From time to time it becomes appropriate to modify one or more of the assumptions, to reflect experience trends (but not random year-to-year fluctuations). The Board has established a policy of performing an Experience Study every 3-5 years to evaluate/modify valuation assumptions. Assumptions used in this report are based on the January 1, 2017 – December 31, 2019 experience study of the MECRS and were adopted by the Board. These assumptions were first used in the December 31, 2020 actuarial valuation. We believe the assumptions are reasonable individually and in the aggregate.

Valuation Assumptions

The rate of investment return was 6.75% per year, compounded annually (net of investment expenses). This assumption is used to make money payable at one point in time equal in value to a different amount of money payable at another point in time. The assumed real rate of return (the net return in excess of the wage inflation rate) is 4.25%. Experience over the last 5 years has been as follows:

	Year Ended December 31					5-Year Average
	2021	2020	2019	2018	2017	
1) Nominal rate of return#	9.7 %	8.6 %	5.6 %	3.4 %	7.4 %	6.9 %
2) Increase in CPI	7.0 %	1.4 %	2.3 %	1.9 %	2.1 %	2.9 %
3) Average Salary Increase (ASI)	3.7 %	5.5 %	4.2 %	(0.1)%	1.2 %	2.9 %
4) Real Return						
- Total: CPI (1) - (2)						4.0 %
- Total: ASI (1) - (3)						4.0 %
- Assumption	4.25 %	4.25 %	4.25 %	4.25 %	4.25 %	4.3 %

The nominal rate of return was computed using the approximate formula: $i = I$ divided by $\frac{1}{2}(A+B-I)$, where I is realized investment income net of expenses, A is the beginning of year asset funding value and B is the end of year funding asset value.

The rate of assumed price inflation was 2.00% per year. This results in a real rate of return over price inflation of 4.75%.

These economic assumptions were updated for the December 31, 2020 valuation.

Valuation Assumptions (Continued)

The rates of salary increase used for individual members are in accordance with the following table. This assumption is used to project a member's current salary to the salaries upon which benefit amounts will be based.

Years of Service	Salary Increase Assumptions for an Individual Member		
	Merit & Seniority	Base (Economic)	Increase Next Year
1	3.46%	2.50%	5.96%
2	4.43%	2.50%	6.93%
3	4.22%	2.50%	6.72%
4	3.70%	2.50%	6.20%
5	3.38%	2.50%	5.88%
6	2.93%	2.50%	5.43%
7	2.55%	2.50%	5.05%
8	2.26%	2.50%	4.76%
9	2.06%	2.50%	4.56%
10	1.85%	2.50%	4.35%
15	1.08%	2.50%	3.58%
20	0.77%	2.50%	3.27%
25	0.75%	2.50%	3.25%
30	0.75%	2.50%	3.25%
35	0.75%	2.50%	3.25%
40	0.75%	2.50%	3.25%

If the number of active members remains constant, then the total active member payroll will increase 2.50% annually, the base portion of the individual salary increase assumptions. This increasing payroll was recognized in amortizing unfunded actuarial accrued liabilities.

Rates of salary increase were updated for the December 31, 2020 valuation.

Valuation Assumptions (Continued)

The rates of retirement used to measure the probability of eligible members retiring during the next year were updated for the December 31, 2020 valuation and are as follows:

Active Members Retiring Next Year Under Normal Retirement			Active Members Retiring Next Year Under Early Retirement			
Ages	% Retiring		Ages	% Retiring		
	Male	Female		Age and Service		Rule of 80
				Male	Female	
60	12%	8%	50			10%
61	11%	15%	51			4%
62	22%	19%	52			7%
63	18%	10%	53			5%
64	18%	10%	54			5%
65	24%	19%	55	5%	10%	5%
66	38%	27%	56	5%	15%	4%
67	15%	19%	57	5%	8%	8%
68	39%	15%	58	5%	7%	8%
69	15%	22%	59	5%	7%	10%
70	27%	25%				
71	50%	19%				
72	42%	19%				
73	50%	19%				
74	50%	19%				
75	100%	19%				
76	100%	19%				
77	100%	19%				
78	100%	19%				
79	100%	19%				
80	100%	100%				

A member was assumed to be eligible for normal retirement after attaining age 60 regardless of service. A member was assumed to be eligible for early retirement after attaining age 55 with at least 20 years of service or if the sum of age and service is at least 80.

Valuation Assumptions (Continued)

The post-retirement healthy mortality table was the Pub-2010 General Healthy Retiree Tables projected to 2039 using projection scale MP-2019.

Sample Attained Ages	Single Life Retirement Values					
	Present Value of \$1 Monthly for Life		Percent Dying Next Year		Future Life Expectancy (Years)	
	Male	Female	Male	Female	Male	Female
50	\$158.10	\$162.48	0.2552%	0.1899%	34.83	37.64
55	150.84	156.27	0.3655%	0.2572%	30.30	33.01
60	141.83	148.25	0.5441%	0.3494%	25.91	28.46
65	130.71	137.94	0.7880%	0.5138%	21.66	23.99
70	117.05	125.04	1.2298%	0.8314%	17.58	19.67
75	101.05	109.55	2.0765%	1.4535%	13.77	15.59
80	83.40	91.89	3.6906%	2.6437%	10.36	11.86

This assumption is used to measure the probabilities of members dying after retirement. The projection to 2039 is the margin for mortality improvement.

Post-retirement disabled mortality table is the Pub-2010 General Disabled Retiree Tables projected to 2039 using projection scale MP-2019.

Pre-retirement mortality is modeled using the Pub-2010 General Employee Tables projected to 2039 using projection scale MP-2019.

These tables were updated for the December 31, 2020 valuation in accordance with an experience study for the System of the three-year period ended December 31, 2019.

Valuation Assumptions (Concluded)

Rates of separation from active membership are shown below (rates do not apply to members eligible to retire and do not include separation on account of death or disability). This assumption measures the probabilities of members remaining in employment. These rates were updated for the December 31, 2020 valuation.

Sample Ages	Years of Service	% of Active Members Separating within Next Year	
		Male	Female
	0-1	24.00%	36.00%
	1-2	18.00%	26.00%
	2-3	13.00%	22.00%
	3-4	7.00%	14.00%
	4-5	7.00%	14.00%
	5-6	n/a	11.00%
30	5 & Up (Men) 6 & Up (Women)	4.00%	6.89%
35		2.96%	5.79%
40		2.33%	5.01%
45		2.00%	4.42%
50		1.87%	3.84%

Rates of disability are divided two-thirds toward duty and one-third toward non-duty disability and are as follows:

Sample Ages	% of Active Members Becoming Disabled within Next Year	
	Male	Female
20	0.003%	0.003%
25	0.003%	0.003%
30	0.003%	0.003%
35	0.013%	0.013%
40	0.051%	0.051%
45	0.105%	0.105%
50	0.173%	0.173%
55	0.256%	0.256%
60	0.382%	0.382%

Miscellaneous and Technical Assumptions

December 31, 2021

Marriage Assumption:	50% of males and 50% of females are assumed to be married for purposes of death-in-service benefits. Male spouses are assumed to be three years older than female spouses.
Pay Increase Timing:	Beginning of the year. This is equivalent to assuming that reported pays represent amounts paid to members during the year ended on the valuation date.
Decrement Timing:	Decrements of all types are assumed to occur mid-year.
Eligibility Testing:	Eligibility for benefits is determined based upon the age nearest birthday and exact fractional service on the date the decrement is assumed to occur.
Decrement Relativity:	Decrement rates are used directly from the experience study, without adjustment for multiple decrement table effects.
Decrement Operation:	Disability and withdrawal decrements do not operate after member reaches retirement eligibility.
Administrative Expense Load:	1.25% of payroll.
Normal Form of Benefit:	The assumed normal form of benefit is the straight life form.
Benefit Service:	Exact fractional service as of the valuation date is used to determine the amount of benefit payable.
Incidence of Contributions:	Contributions are assumed to be received continuously throughout the year based upon the actual payroll payable at the time contributions are made.
COLA Assumption:	1.00% compounded annually.
Adjustments:	Normal and Early retirement costs were increased by 12% to reflect lump sums that are payable at retirement but not available in the active data. Retiree liabilities were increased 1% to account for pop-up retiree benefits.
Post-Retirement Subsidy:	55% of current actives and 25% of current terminated vested members were assumed to elect to receive the post-retirement health subsidy upon retirement. Current retirees were assumed not to alter their initial election after retirement.
Data Processing:	The Retirement System provides data in excel format. GRS reviews the data for reasonableness and completeness. Questions are sent to the System. Data is then modified based on the answers provided. For new members with less than one year of earnings, reported pay is annualized based on reported service.
Data Adjustments:	For one member who had no salary provided, their prior year's salary was used.

SECTION D

OPERATION OF THE RETIREMENT SYSTEM

Basic Financial Objective and Operation of the Retirement System

Benefit Promises Made Which Must Be Paid For. A retirement system is an orderly means of handing out, keeping track of, and financing contingent pension promises to a group of employees. As each member of the retirement system acquires a unit of service credit they are, in effect, handed an “IOU” which reads: “The Employees Retirement System promises to pay you one unit of retirement benefits, payments in cash commencing when you retire.”

The principal related financial question is: **When shall the money required to cover the “IOU” be contributed?** This year, when the benefit of the member’s service is received? Or, some future year when the “IOU” becomes a cash demand?

This Retirement System meets the requirement of funding future benefits during the year by having the following **Financial Objective: To establish and receive contributions, expressed as percents of active member payroll, which will remain approximately level from year to year** and will not have to be increased for future generations of taxpayers.

Translated into actuarial terminology, a level percent-of-payroll contribution objective means that the contribution rate must be at least:

Normal Cost (the current value of benefits likely to be paid on account of members’ service being rendered in the current year)

... plus ...

Interest on the Unfunded Actuarial Accrued Liability (the difference between the actuarial accrued liability and current system assets).

If contributions to the Retirement System are less than the preceding amount, the difference, plus investment earnings not realized thereon, will have to be contributed at some later time, or, benefits will have to be reduced, to satisfy the fundamental fiscal equation under which all retirement systems must operate; that is:

$$B = C + I - E$$

Benefit payments to any group of members and their beneficiaries cannot exceed the sum of:

Contributions received on behalf of the group

... plus ...

Ivestment earnings on contributions received

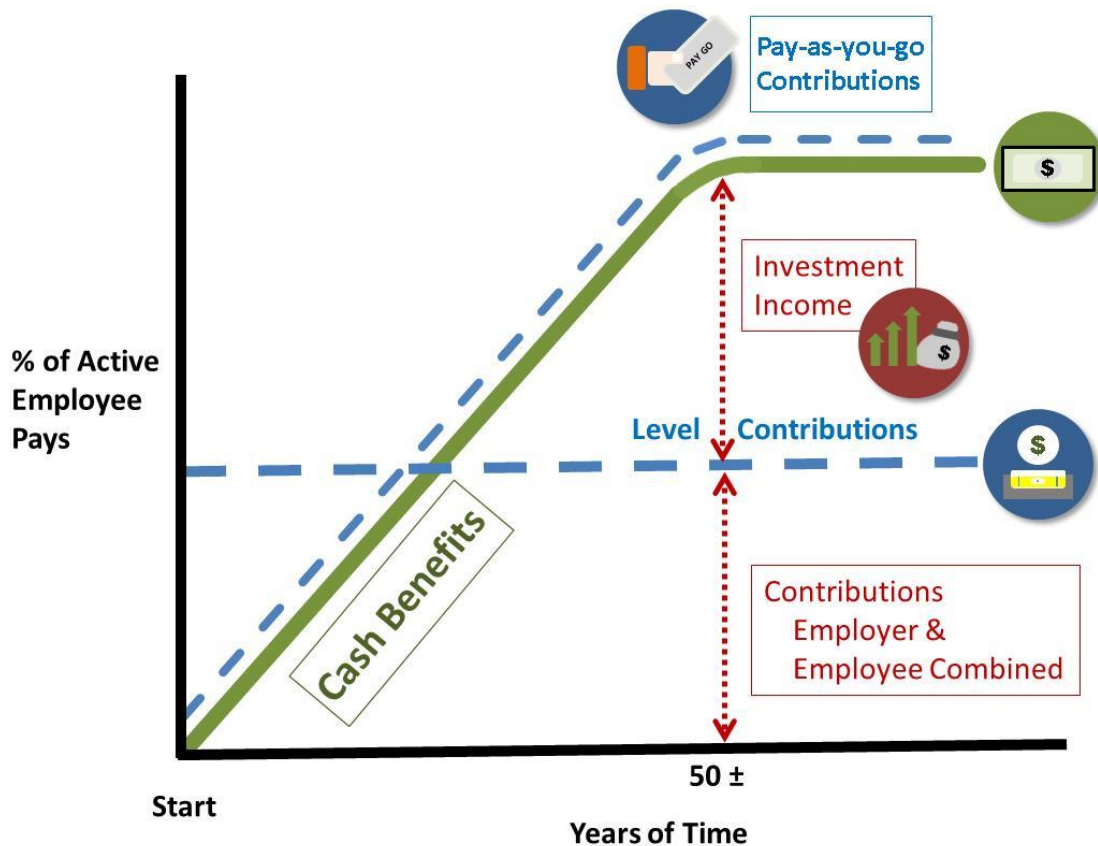

... minus ...

Expenses incurred in the operation of the system.

There are retirement systems designed to defer the bulk of contributions far into the future. They are lured by artificially low present contributions, but the inevitable consequence is a relentlessly increasing contribution rate to a level greatly in excess of the level percent-of-payroll rate.

A by-product of the level percent-of-payroll contribution objective is the accumulation of invested assets for varying periods of time. Investment income becomes a major contributor to the Retirement System and the amount is directly related to the amount of contributions and investment performance.

Computed Contribution Rate Needed to Finance Benefits. From a given schedule of benefits and from the data furnished, the contribution rate is calculated ***by means of an actuarial valuation*** - the technique of assigning monetary values to the risks assumed in operating a retirement system.

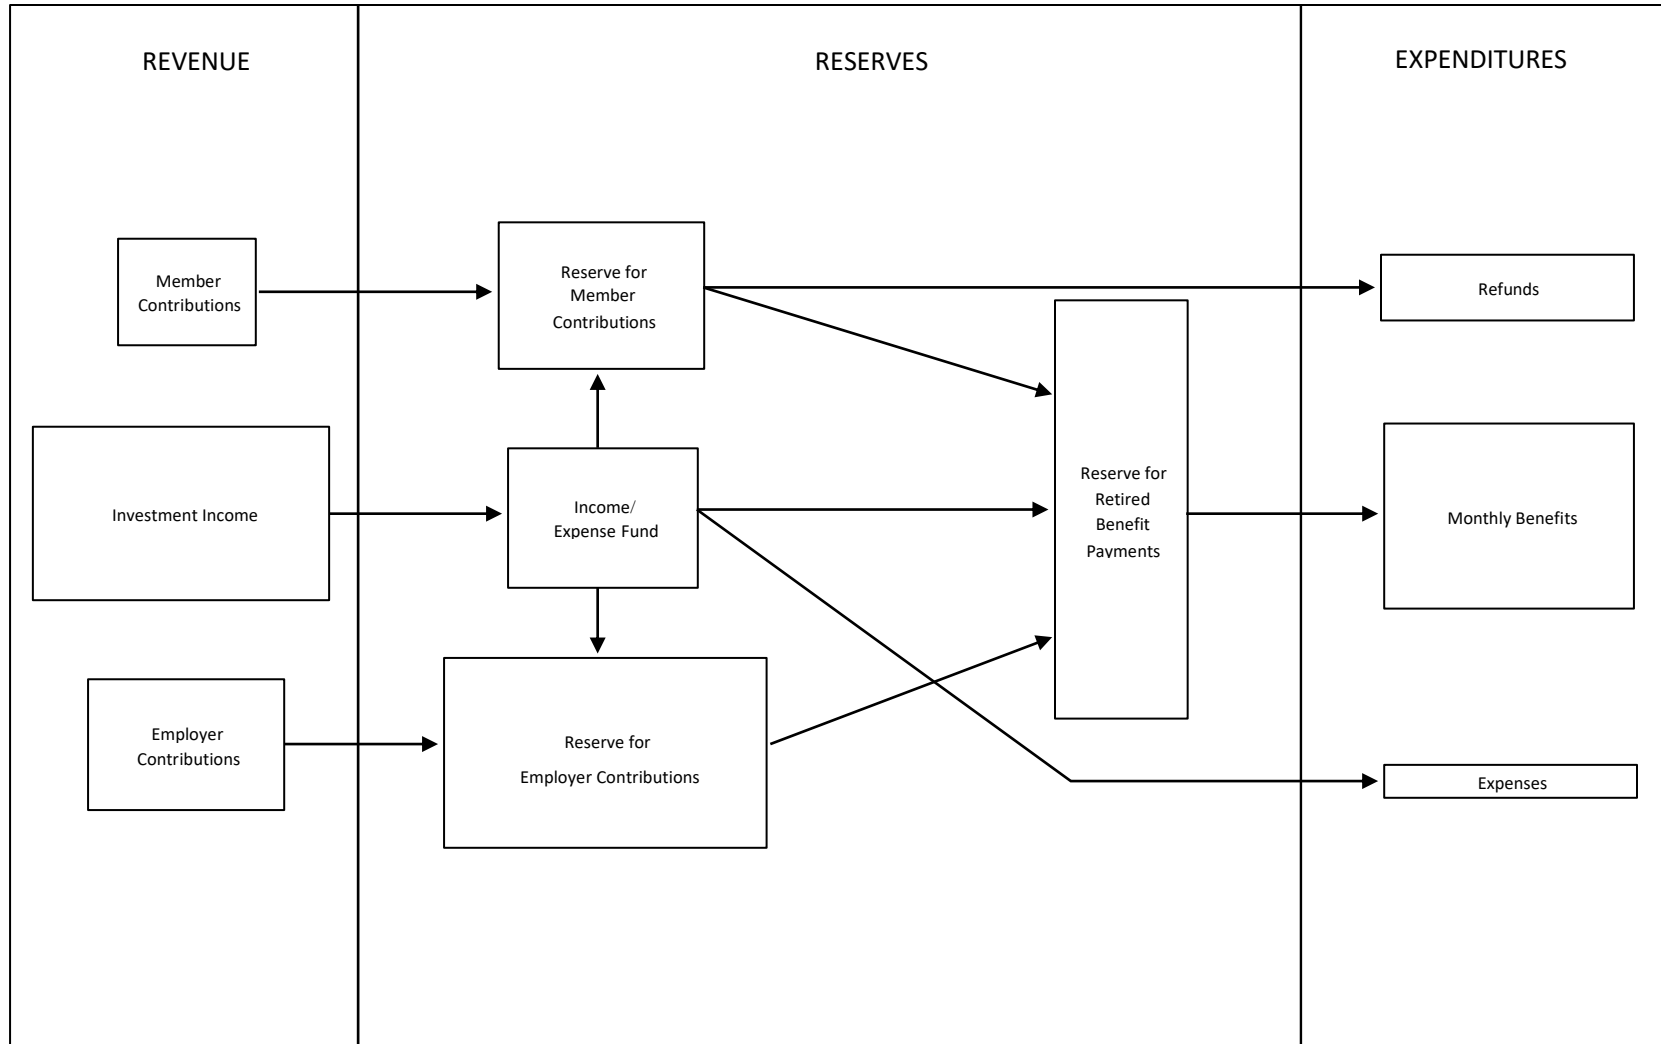

CASH BENEFITS LINE. This relentlessly increasing line is the fundamental reality of retirement plan financing. It happens each time a new benefit is added for future retirements (and happens regardless of the design for contributing for benefits).

LEVEL CONTRIBUTION LINE. Determining the level contribution line requires detailed assumptions concerning a variety of experiences in future decades, including:

- **Economic Risk Areas**
 - Rates of investment return
 - Rates of pay increase
 - Changes in active member group size
- **Non-Economic Risk Areas**
 - Ages at actual retirement
 - Rates of mortality
 - Rates of withdrawal of active members (turnover)
 - Rates of disability

Flow of Money through the Retirement System

Glossary

Accrued Service. The service credited under the plan which was rendered before the date of the actuarial valuation.

Actuarial Accrued Liability. The difference between (i) the actuarial present value of future plan benefits, and (ii) the actuarial present value of future normal cost. Sometimes referred to as “accrued liability” or “past service liability.”

Actuarial Assumptions. Estimates of future plan experience with respect to rates of mortality, disability, turnover, retirement, rate or rates of investment income and salary increases. Decrement assumptions (rates of mortality, disability, turnover and retirement) are generally based on past experience, often modified for projected changes in conditions. Economic assumptions (salary increases and investment income) consist of an underlying rate in an inflation-free environment plus a provision for a long-term average rate of inflation.

Actuarial Cost Method. A mathematical budgeting procedure for allocating the dollar amount of the “actuarial present value of future plan benefits” between the actuarial present value of future normal cost and the actuarial accrued liability. Sometimes referred to as the “actuarial funding method.”

Actuarial Equivalent. A single amount or series of amounts of equal value to another single amount or series of amounts, computed on the basis of the rate(s) of interest and mortality tables used by the plan.

Actuarial Present Value. The amount of funds presently required to provide a payment or series of payments in the future. It is determined by discounting the future payments at a predetermined rate of interest, taking into account the probability of payment.

Amortization. Paying off an interest-bearing liability by means of periodic payments of interest and principal, as opposed to paying it off with a lump sum payment.

Experience Gain (Loss). A measure of the difference between actual experience and that expected based upon a set of actuarial assumptions during the period between two actuarial valuation dates, in accordance with the actuarial cost method being used.

Normal Cost. The annual cost assigned, under the actuarial funding method, to current and subsequent plan years. Sometimes referred to as “current service cost.” Any payment toward the unfunded actuarial accrued liability is not part of the normal cost.

Reserve Account. An account used to indicate that funds have been set aside for a specific purpose and are not generally available for other uses.

Unfunded Actuarial Accrued Liabilities. The difference between the actuarial accrued liability and valuation assets. Sometimes referred to as “unfunded accrued liability.”

Valuation Assets. The value of current plan assets recognized for valuation purposes.
